# 2G

## Digital Cellular

European standard GSM became a de facto global standard.

Some effort to seek commonalities against the backdrop of world's economic competition

**Result of market efforts after  
completion of standards**

# Global Deployment

Worldwide cellular subscribers by technology, 1998

Source: ITU adapted from Ericsson, GSM MoU, CDMA Development Group.

# 3G

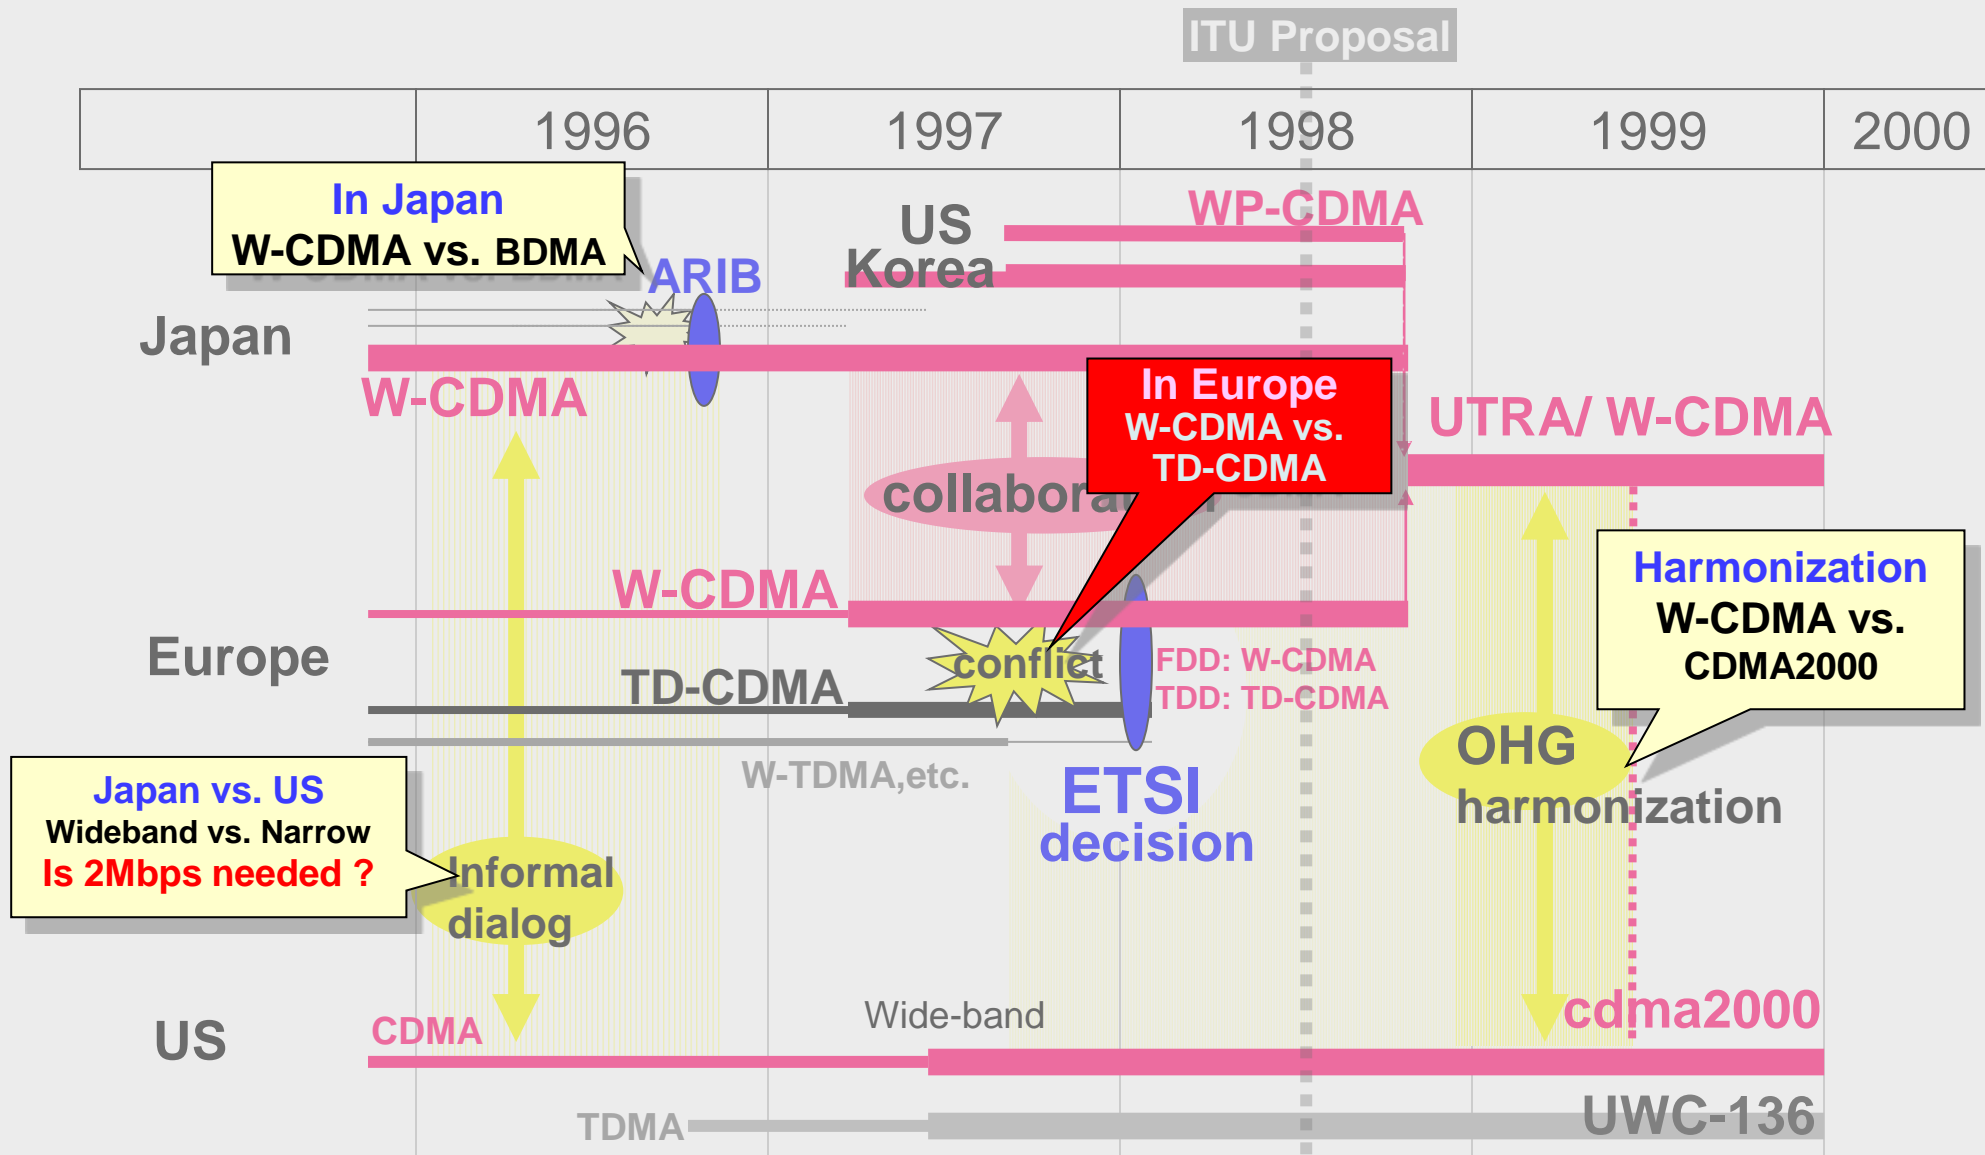

# IMT-2000

Since 3G standardization aimed at a globally unified standard, after fierce discussions, the number of standards was narrowed down.

**Maximum effort toward unified standard,  
but failed to achieve a single standard**

# 3G Standardization Discussions

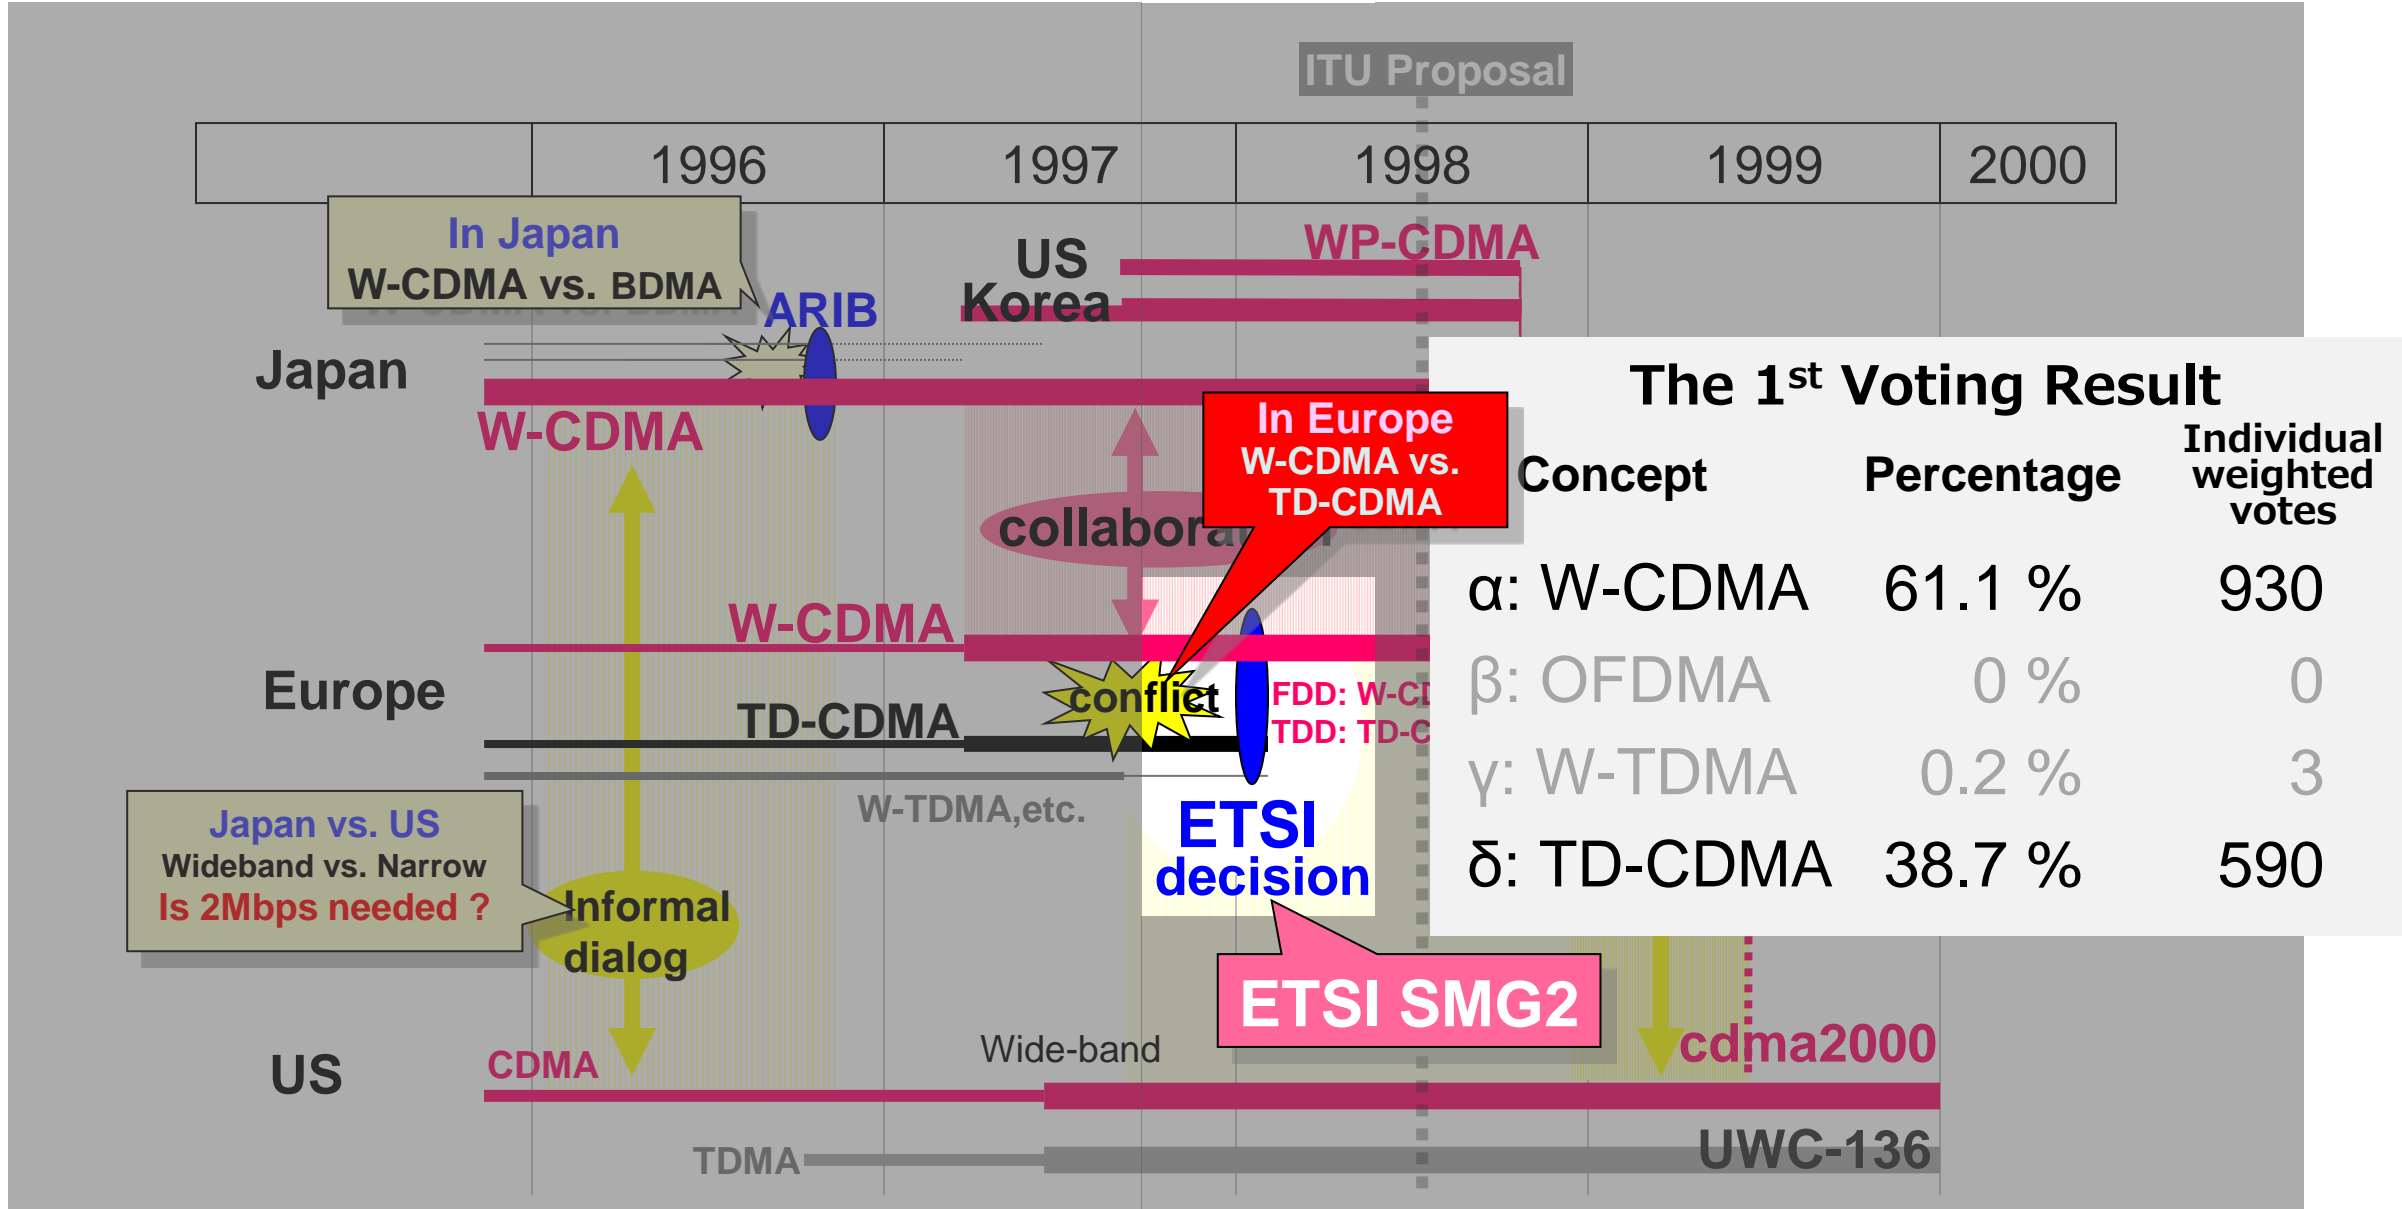

# TD-CDMA versus W-CDMA

# 3G Standardization Discussions

# ETSI Consensus Decision

A compromise was agreed to adopt both concepts, where W-CDMA is applied to major frequency bands.

- Paired band: W-CDMA of ETSI Alpha group ← **FDD**
- Unpaired band: TD-CDMA of ETSI Delta group ← **TDD**
- Additional objectives
  - Low-cost terminal
  - Harmonization with GSM
  - FDD/TDD dual-mode operation
  - Fit into 2\*5 MHz spectrum allocation

# After TD-CDMA vs. W-CDMA

Yesterday's enemy is today's friend. He became a companion in the dispute with CDMA2000 and a co-author for a paper on 3G standards.

ICB3G**

※Super3G : The name of Enhanced3G called in DoCoMo

26<sup>th</sup> May 2004, ICB3G

NTT DoCoMo

# Input Document to the 3GPP RAN Plenary Meeting

The document for the Study Item did not have the term "4G" nor "LTE", only used the general term "3G long-term evolution". Later, the abbreviation for the Work Item name became LTE, and it came to be called LTE.

TSG-RAN Meeting #26

RP-040461

Athens, Greece, 8-10, December, 2004

**Agenda Item:8.12**

**Source:** **NTT DoCoMo**, Alcatel, Cingular Wireless, CMCC, Ericsson, Fujitsu, Huawei, LG Electronics, Lucent Technologies, Mitsubishi Electric, Motorola, NEC, Nokia, Nortel Networks, Orange, Panasonic, Philips, Qualcomm Europe, Samsung, Sharp, Siemens, Telecom Italia, Telefonica, TeliaSonera, T-Mobile, Vodafone

**Title:** Proposed Study Item on Evolved UTRA and UTRAN

**Document for : Discussion and approval**

In the RAN Future Evolution Workshop, many of the presentations pointed out the need of 3G long-term evolution to meet the future demand and to maintain its competitive position for coming decades. Several interesting new technology components such as OFDM with a flexible and broader RF bandwidth were presented as potential candidates for the evolution. It was pointed out such a technology enhancement should be applied to UTRAN architecture as well as the UTRA radio interface.

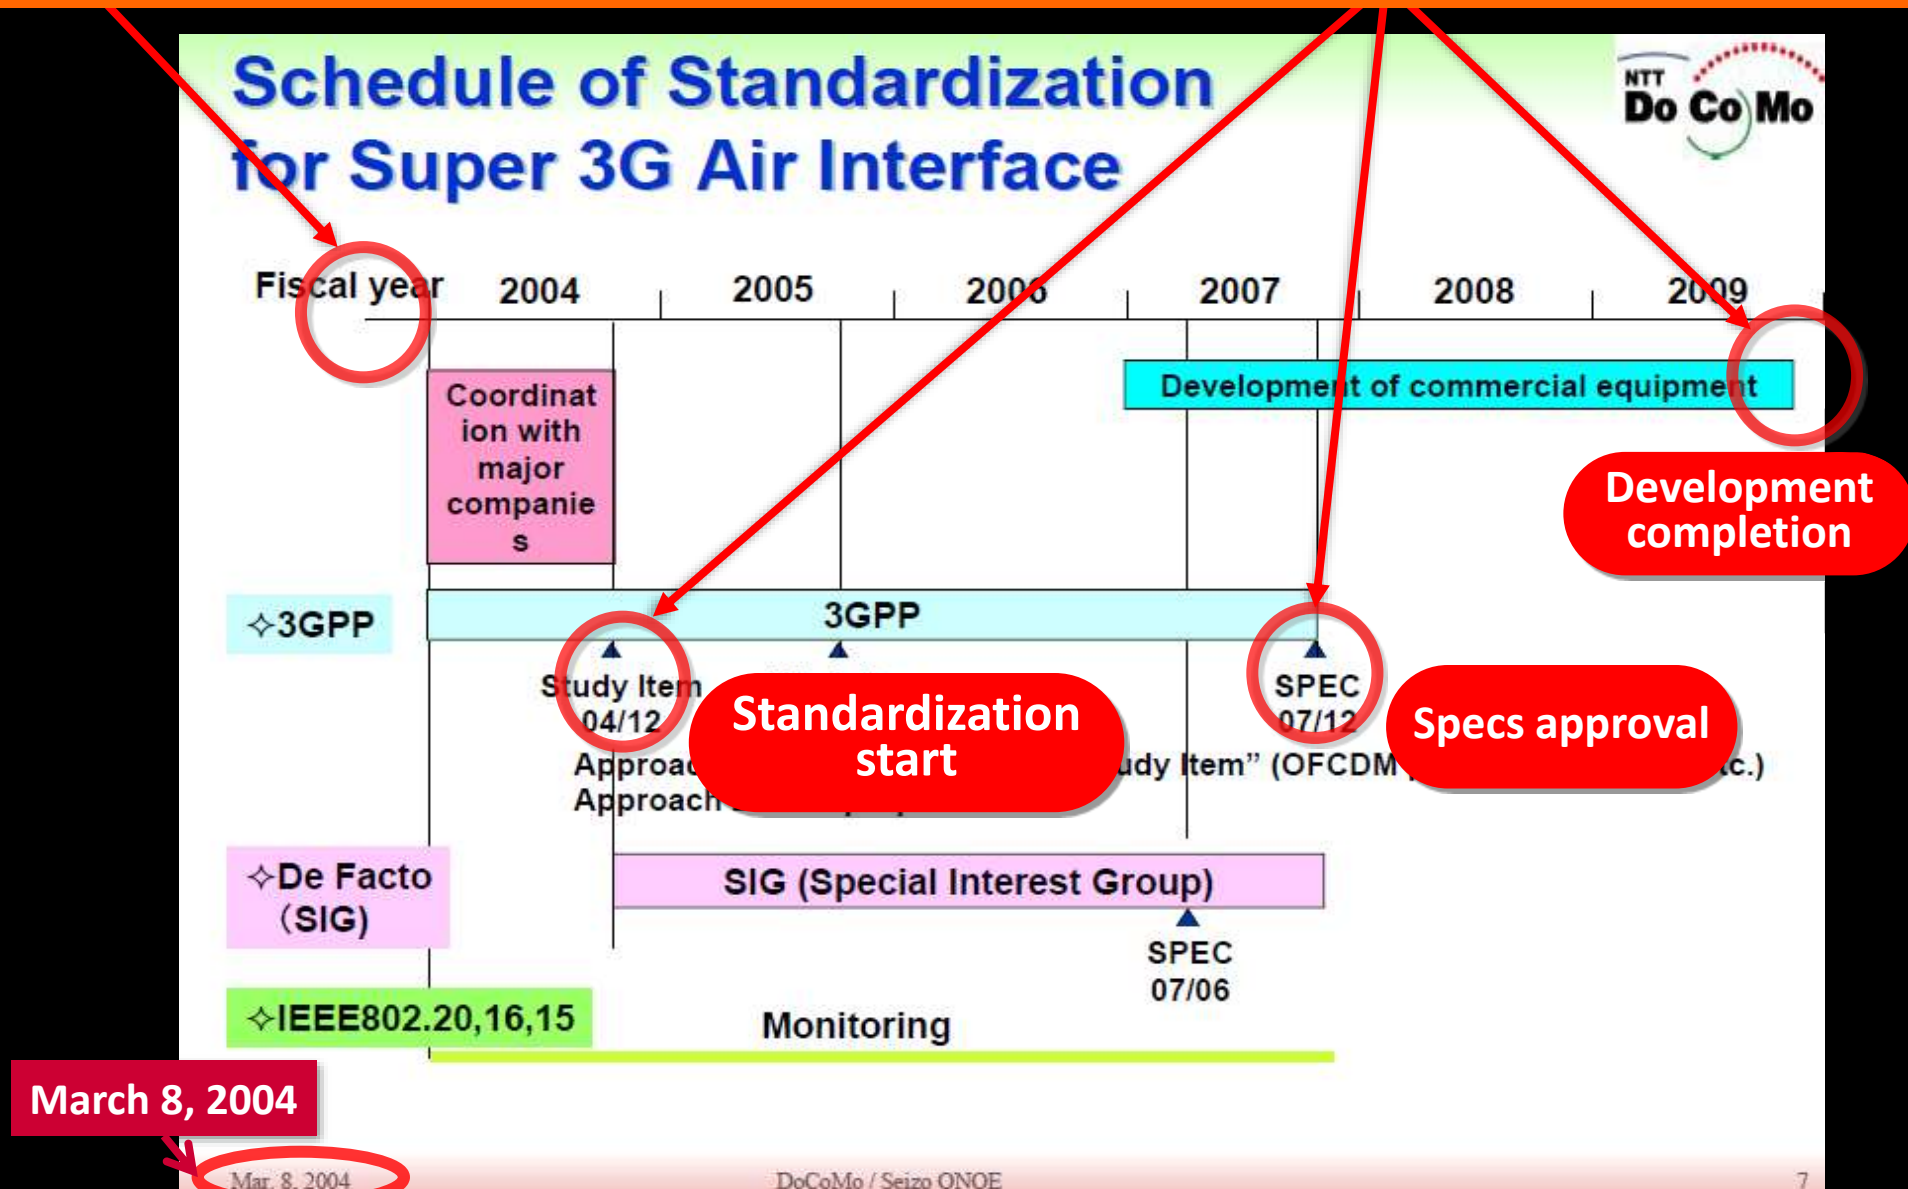

It is proposed that 3GPP should initiate the feasibility study of the long-term evolution accounting for the above situation. In this paper, a Study Item Description is presented for this study.

Concerning the time plan, we propose to complete the feasibility study by June 2006 and envisage all relevant core specifications by June 2007.

# A Slide used for initiating the standardization

In early 2004, DOCOMO predicted the milestones, which happened.

## KT on target to offer 5G at Winter Olympics in 2018

16 Feb 2016

[South Korea](#)

South Korean mobile network operator KT Corp has reportedly said that it is on track to be able to provide 5G services at the Winter Olympics venue in 2018 as scheduled, according to Yonhap News Agency. It is understood that KT is aiming to complete 30% of network construction by the end of this month, with the infrastructure project set to be completed by the end of the year, with a view to starting the first services in 2017. As the official network service provider of the 2018 PyeongChang Winter Olympics, KT meanwhile has also said that its wireless platforms will be able to serve up to 250,000 devices at the same time at the event.

## At an event hosted by a vender

## At totally different occasion with former supreme boss

...(Later, come to think)...

A time may come when network and user equipment will be connected by automatically negotiating without standards, assuming progress of softwarization and ultra low power consumption.

It may happen  
in 10G or **12G** era.

Is Standardization necessary? You are still involved in that.

Of course.  
To connect  
the world.

...your opinion may  
be correct.

**In 12G era, there is no border of standards.**

(Automatic protocol negotiation even for radio interface)

**Even if radio technology evolution continues, hardware technology will be established that allows to change the interface and processing by updating software without sacrificing cost or power consumption.**

All-photonics circuits become inexpensive and versatile COTS.

This does NOT mean that the standardization will be unnecessary in the future.

The point here is that the standardization framework should be evolved to respond to technological changes.

We cannot necessarily say that this is the ideal situation. We need to discuss this issue in the future around 2040 before the time comes.

**In 12G era, there is no border of standards.**  
(Automatic protocol negotiation even for radio interface)

**Even if radio technology evolution continues, hardware technology will be established that allows to change the interface and processing by updating software without sacrificing cost or power consumption.**
